## Halogen Free & MUD Resistant Cables

Marine & Offshore Cable

NEK 606 ( 2004 )

The Innovative Challenger For  
Your Dream

## P r e f a c e

### A new beginning to deliver the dream of customers - JS Cable

A new name of endless innovation and creative ideas - JS Cable

Since its foundation in 1968, JS Cable has been a pioneer in rubber cable industry and known for its excellence in quality and technology.

JS Cable is a world class leader in shipboard and offshore cable products with state of art facilities. We pursue global standard quality, safety and health and environment with full compliance of ISO 9001 (Quality Management), ISO 14001 (Environment Management) and OHSAS 18001 (Safety and Healthy working Environment Management) standards.

We continue to strive for a pace setter in cable manufacturing industry by implementing state of art R&D Center, best practice HR Program, and a new ERP initiative.

A mission to deliver light, energy, and information to global communities - JS Cable

A great leap into the future, relentless pursue for customer value - JS Cable

With our customers, we devote our full attention to make a better world tomorrow.

#### ■ Products & Systems of JS Cable

Marine & Offshore Cables

Rubber & Specialty Cables

Electric Cables

Data Cables

Copper Rod

We supply our best quality products to markets all over the world.

## Company Profile

1968 ● The company incorporated in the name of YONHAP CABLE CO., LTD.

1978 ● Designated as a specialized factory for shipbuilding materials & equipment.

1984 ● Stock listed for public subscription.

1987 ● Moved to new constructed factory site located in Cheon-An

1990 ● Communication cable plant completed in Mokchon.

1992 ● Operation of the copper smelting furnace plant commenced.

1995 ● ISO 9001 certification acquired. (LRQA)

2000 ● LAN cable production line started its commercial operation.

2001 ● TL (Telecommunication Leadership) 9000 certification acquired(LRQA).  
ETL for IEEE 45 Type P Off-shore and Marine structure cables acquired.  
UL for UL 1309 Type Off-shore and Marine structure cables acquired.

2002 ● Korean World Class Products Award for Marine Cable in 2002  
(Minister of Commerce, Industry and Energy Republic of Korea)

2004 ● ISO 14001 certification acquired(LRQA).

2005 ● OHSAS 18001 certification acquired(LRQA).  
The corporate governance of the company acquired by LS Group

## Contents

### General Introduction ..... 04

- Halogen Free and MUD Resistant Cable
- Abbreviation
- Code Designation

### Construction Table of Offshore Cables ..... 06

### Type Approval Certificate ..... 76

# General Introduction >>

Halogen Free and Mud Resistant Cables

## ■ Halogen Free and MUD Resistant Cable

- 1. Tinned copper conductor
- 2. Mica / Glass tape
- 3. EPR insulation
- 4. Individual screen (with drain wire)

- 5. Collective screen (with drain wire)
- 6. Inner covering ; HFC
- 7. Tinned copper braid armor (or Galvanized steel wire braid armor)
- 8. Sheath (= Outer sheath) ; SHF2, SHF Mud

Offshore oil production and exploration installation cost enormous sums of money to build and maintain. To ensure problem-free and smooth operations JS Cable always uses the best materials available in the production of offshore cables. The danger of fire is a calculated risk in offshore oil and gas activities and it is important therefore to use the best materials to obtain optimal flame retardancy and/or fire resistance properties.

The different demands on a cable in this field are many. Here are some of them:

1. The cable must be self-extinguishing.
2. It must function during and after a fire.
3. It must not give off corrosive gases.
4. It must not give off thick smoke.
5. It must give off as little toxic gases as possible.
6. It must be low in weight and small in dimension.
7. It must be easy to install

Halogen-containing compounds, for example, are good self-extinguishing materials. But all materials containing halogens will give off corrosive gases in a fire. In this connection we emphasize that the corrosion effect depends very much on the amount of halogen in the material.

Chlorine, fluorine, bromine and iodine are all halogens. During a fire these elements will combine with hydrogen and form gases, which

together with humidity or water will create very corrosive acids. It is, however, possible today to compound good flame retardant materials without any halogens, and JS Cable is now producing and selling completely halogen free offshore cables.

These new cables together with our well known low-smoke, low halogen cables fully meet the IEC 60092-3, IEC 60092-350, IEC 60332-1, IEC 61034, IEC 60332-3 Cat A', IEEE 1202 and IEC 60331 requirements.

To avoid possible confusion between the flame retardant and fire resisting cables, here is a brief explanation of the differences:

1. A flame retardant cable is self-extinguishing and will not propagate the fire.
2. A fire resistant cable is designed to function in a fire, ensuring the integrity of vital circuits, which operate emergency lights, emergency pumps, shut-down systems, PA systems, etc.

Whether to use flame retardant, fire resistant and/or halogen free cables may to a large extent depend on the concept of the project, the approval authority and the philosophy of the rig owner or the operator.

There is, however, no doubt that by using halogen free cables, you avoid the risk of corrosion of the equipment and dangerous effects on human life in case of fire.

## Abbreviation

<b>XLPE</b>	Cross-Linked Polyethylene
<b>E P R</b>	Ethylene Propylene Rubber
<b>C S P</b>	Chlorosulphonated Polyethylene
<b>P C P</b>	Polychloroprene
<b>H F C</b>	Halogen Free Compound
<b>XLPE</b>	Cross-Linked Polyolefin (SHF2/SHF Mud)
<b>M G T</b>	Mica / Glass Tape

## Code Designation

Materials	1 Letter Insulation	2 Letter Inner Covering	3 Letter Armour	4 Letter Sheath
XLPE	T			
EPR	R			
MGT / EPR	B			
HFC (Halogen Free Compound)		F		
CSP		H		H
PCP		C		C
SHF 2 (Halogen Free Thermoset Compound)				U
SHF Mud (Halogen Free & Mud Resistant Elastomer)				B
Galvanized Steel Wire			C	
Copper Wire			O	
Phosphorbronze Wire			P	

## Added Abbreviation

( i )	Individual Screen
( c )	Collective Screen
( i & c )	Individual & Collective Screen

## High Voltage Power Cable

### 3.6/6kV RFOU, RFOU/B

#### Halogen Free Flame Retardant Cable

- 3.6/6kV RFOU
- 6/10kV RFOU
- 8.7/15kV RFOU

NEK 606 Type : P2, P3, P4

#### Halogen Free & Mud Resistant Flame Retardant Cable

- 3.6/6kV RFOU/B
- 6/10kV RFOU/B
- 8.7/15kV RFOU/B

NEK 606 Type : P2/P9, P3/P10, P4/P11

#### Application

- Fixed installation in both explosion risk and safe areas
- High voltage power cables for general purposes
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend RFOU/B

#### Standards applied

- IEC 60092-354 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

## Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Conductor Screen		Semi-conductive tape or extruded semi-conductive compound.
Insulation	R	EP-Rubber
Insulation Screen		Semi-conductive tape or extruded semi-conductive compound.
Metallic Screen		Tinned copper wire braid (If necessary, suitable tape may be applied on the braid) Copper tape may be applied purchaser order occur, if purchaser require.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid.(*)
Sheath	U	Flame retardant halogen free thermoset compound.(SHF2) Flame retardant halogen free & mud resistant thermoset compound.(SHF MUD)
Color	U/B	Red

(\*) RFCU, RFCU/B = with galvanized steel wire braid

## Cable Type 3.6/6kV RFOU, 3.6/6kV RFOU/B

No. of Cores & Conductor Area	Thickness of Insulation	Diameter over Inner Covering	Overall Diameter	Conductor Resistance (at 20°C)(max.)	Cable Weight	Current Carrying Capacity(Max.) (at 45°C)

### High Voltage Power Cable

## 3.6/6kV BFOU, BFOU/B

### Halogen Free Fire Resistant Cable

- 3.6/6kV BFOU
- 6/10kV BFOU

NEK 606 Type : P6, P7

### Halogen Free & Mud Resistant Fire Resistant Cable

- 3.6/6kV BFOU/B
- 6/10kV BFOU/B

NEK 606 Type : P6/P13, P7/P14

### Application

- Fixed installation in both explosion risk and safe areas
- High voltage power cables for emergency and critical systems
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend BFOU/B

### Standards applied

- IEC 60092-350 : Design guidelines
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Tape + EP-Rubber
Insulation Screen		Semi-conductive tape or extruded semi-conductive compound.
Metallic Screen		Tinned copper wire braid. (if necessary, suitable tape may be applied on the braid) Copper tape may be applied purchaser order occur.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid. (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2). Flame retardant halogen free & mud resistant thermoset compound(SHF MUD).
Color		Red

(\*) BFCU, BFCU/B = with galvanized steel wire braid  
• Cables to 1000°C with an upgraded IEC 60331 test.

### Cable Type 3.6/6kV BFOU, 3.6/6kV BFOU/B

No. of Cores & Conductor Area	Thickness of Insulation	Diameter over Inner Covering	Overall Diameter	Conductor Resistance (at 20°C)(max.)	Cable Weight	Current Carrying Capacity(Max.) (at 45°C)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	R	EP-Rubber
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Outer Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Black

(\*) RFCU, RFCU/B = with galvanized steel wire braid

### Low Voltage Power & Control Cable

## 0.6/1KV RFOU, RFOU/B

### Halogen Free Flame Retardant Cable

- 0.6/1KV RFOU NEK 606 Type : P1

### Halogen Free & Mud Resistant Flame Retardant Cable

- 0.6/1KV RFOU/B NEK 606 Type : P1/ P8

### Application

- Fixed installation for power, control and lighting in both explosion risk and safe areas.
- General purposes for installations in areas exposed to MUD and drilling/cleaning fluids we recommend RFOU/B

### Standards applied

- IEC 60092-353 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties.
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Low Voltage Power & Control Cable

## 0.6/1kV BFOU, BFOU/B

### Halogen Free Fire Resistant Cable

- 0.6/1kV BFOU NEK 606 Type : P5

### Halogen Free & Mud Resistant Fire Resistant Cable

- 0.6/1kV BFOU/B NEK 606 Type : P5/P12

### Application

- Fixed installation for power, control and lighting in both explosion and safe areas.
- Emergency and critical systems.
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend BFOU/B

### Standards applied

- IEC 60092-353 : Design guidelines
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Glass Tape + EP-Rubber
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Black

(\*) BFCU, BFCU/B = with galvanized steel wire braid  
• Cables to 1000°C with an upgraded IEC 60331 test.

### Cable Type 0.6/1kV BFOU, 0.6/1kV BFOU/B

### Low Voltage Power & Control Cable

## 0.6/1kV RU, RU/B

### Halogen Free Flame Retardant Cable

- 0.6/1kV RU NEK 606 Type : P18

### Halogen Free & Mud Resistant Flame Retardant Cable

- 0.6/1kV RU/B

### Application

- Unarmoured cable.
- Fixed installations in ships.
- Control, general power and lighting.

### Standards applied

- IEC 60092-353 : Design guidelines
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties
- NEK 606(2004)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper.
Insulation	R	EP-Rubber
Sheath	U	Flame retardant halogen free compound(SHF2)
	U/B	Flame retardant halogen free & Mud resistant thermoset compound(SHF Mud)
Color		Black

## Low Voltage Power & Control Cable

# 0.6/1kV BU, BU/B

### Halogen Free Fire Resistant Cable

- 0.6/1kV BU NEK 606 Type : P17

### Halogen Free & Mud Resistant Fire Resistant Cable

- 0.6/1kV BU/B

### Application

- Fixed installation in ships, control, general power and lighting

### Standards applied

- IEC 60092-353 : Design guidelines
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Glass Tape + EP-Rubber
Sheath	U	Flame retardant halogen free thermoset compound(SHF2)
	U/B	Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Black

• Cables to 1000°C with an upgraded IEC 60331 test.

### Instrumentation & Communication Cable

## 250V RFOU(i), RFOU/B(i)

### Halogen Free Flame Retardant Cable Individual Screen

- 250V RFOU(i) NEK 606 Type : S1

### Halogen Free & Mud Resistant Flame Retardant Cable Individual Screen

- 250V RFOU/B(i) NEK 606 Type : S1/S5

### Application

- Fixed installation for instrumentation, communication, control and alarm system in both explosion risk and safe areas, general purposes
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend RFOU/B(i)

### Standards applied

- IEC 60092-376 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	R	EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Individual Screen	(i)	Each pair / triad are individually screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by numbered tape and printed numbers on insulation.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) RFOU(i), RFOU/B(i) = with galvanized steel wire braid

## Instrumentation & Communication Cable 250V RFOU(c), RFOU/B(c)

### Halogen Free Flame Retardant Cable Collective Screen

- 250V RFOU(c) NEK 606 Type : S2

### Halogen Free & Mud Resistant Flame Retardant Cable Collective Screen

- 250V RFOU/B(c) NEK 606 Type : S2 / S6

#### Application

- Fixed installation for instrumentation, communication, control and alarm system in both explosion risk and safe areas, general purposes.
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend RFOU/B

#### Standards applied

- IEC 60092-376 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22.2 NO-38 : Low Temperature properties (optional)

## Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	R	EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Collective Screen	(c)	Pairs / triads are laid up and collectively screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by printed numbers on insulation.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U	Flame retardant halogen free thermoset compound(SHF2)
	U/B	Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) RFCU(c), RFCU/B(c) = with galvanized steel wire braid

### Cable Type 250V RFOU(c), 250V RFOU/B(c) Collective Screen, Twisted Pair/Triad

### Instrumentation & Communication Cable

#### 250V RFOU(i&c), RFOU/B(i&c)

##### Halogen Free Flame Retardant Cable Individual & Collective Screen

- 250V RFOU(i&c)

##### Halogen Free & Mud Resistant Flame Retardant Cable Individual & Collective Screen

- 250V RFOU/B(i&c)

##### Application

- Fixed installation for instrumentation, communication, control and alarm system in both explosion risk and safe areas, general purposes
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend RFOU/B(i&c)

##### Standards applied

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	R	EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Individual Screen	(i)	Each pair / triad are individually screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by numbered tape and printed numbers on insulation.
Collective Screen	(c)	Individually screened pairs / triads are laid up and collectively screened by copper (or aluminum) backed polyester tape with tinned copper drain wire.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) RFCU (i&c) , RFCU/B (i&c) = with galvanized steel wire braid

## Instrumentation & Communication Cable 250V BFOU(i), BFOU/B(i)

### Halogen Free Fire Resistant Cable Individual Screen

- 250V BFOU(i) NEK 606 Type : S3

### Halogen Free & Mud Resistant Fire Resistant Cable Individual Screen

- 250V BFOU/B(i) NEK 606 Type : S3/S7

### Application

- Fixed installation instrumentation, communication, control and alarm emergency and critical system in both explosion risk and safe areas.
- For installations in areas exposed to MUD and drilling/cleaning fluids we recommend BFOU/B(i)

### Standards applied

- IEC 60092-376 : Design guidelines
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Glass tape + EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Individual Screen	(i)	Each pair / triad are individually screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by numbered tape and printed numbers on insulation.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) BFCU(i), BFCU/B(i) = with galvanized steel wire braid  
• Cables to 1000°C with an upgraded IEC 60331 test.

### Instrumentation & Communication Cable

## 250V BFOU(c), BFOU/B(c)

#### Halogen Free Fire Resistant Cable Collective Screen

- 250V BFOU(c) NEK 606 Type : S4

#### Halogen Free & Mud Resistant Fire Resistant Cable Collective Screen

- 250V BFOU/B(c) NEK 606 Type : S4/S8

#### Application

- Fixed installation instrumentation, communication, control and alarm system in both explosion and safe areas.
- For installation in areas exposed to MUD and drilling/cleaning fluids we recommend BFOU/B(c)

#### Standards applied

- IEC 60092-376 : Design guideline
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire.
Insulation	B	Mica / Glass tape + EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Collective Screen	(c)	Pairs / triads are laid up and collectively screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by printed numbers on insulation.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) BFCU(i), BFCU/B(i) = with galvanized steel wire braid  
• Cables to 1000°C with an upgraded IEC 60331 test.

- 250V BFOU(i&c)

#### Halogen Free & Mud Resistant Fire Resistant Cable Individual & Collective Screen

- 250V BFOU/B(i&c)

#### Application

- Fixed installation instrumentation, communication, control and alarm emergency and critical system in both explosion risk and safe areas.
- For installation in areas exposed to MUD and drilling/cleaning fluids we recommend BFOU/B(i&c)

#### Standards applied

- IEC 60092-376 : Design guideline
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

#### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire.
Insulation	B	Mica / Glass tape + EP-Rubber
Twisting		Color coded cores twisted together to form a pair/ triad
Individual Screen	(i)	Each pair / triad are individually screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by numbered tape and printed numbers on insulation.
Collective Screen	(c)	Individually screened pairs / triads are laid up and collectively screened by copper (or aluminum) backed polyester tape with tinned copper drain wire.
Inner Covering	F	Flame retardant halogen free compound.
Armour	O	Tinned copper wire braid (*)
Sheath	U U/B	Flame retardant halogen free thermoset compound(SHF2) Flame retardant halogen free & mud resistant thermoset compound(SHF MUD)
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

(\*) BFCU(i&c) , BFCU/B(i&c) = with galvanized steel wire braid  
• Cables to 1000°C with an upgraded IEC 60331 test.

#### Cable Type 250V BFOU(i&c) & 250V BFOU/B(i&c) Individual & Collective Screen, Twisted Pair/Triad

### Instrumentation & Communication Cable

## 250V RU(i), RU/B(i)

### Halogen Free Flame retardant Unarmoured cable Individual screen

- 250V RU(i) NEK 606 Type : S11

### Halogen Free & Mud Resistant Flame retardant Unarmoured cable Individual screen

- 250V RU/B(i)

### Application

- Unarmoured Cable Fixed installation for instrument at Communication, control system, general purposes

### Standards applied

- IEC 60092-376 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

## Instrumentation & Communication Cable

### 250V RU(c), RU/B(c)

#### Halogen Free Flame Retardant Unarmoured Cable Collective Screen

- 250V RU(c)

#### Halogen Free & Mud Resistant Flame Retardant Unarmoured Cable Collective Screen

- 250V RU/B(c)

#### Application

- Unarmoured Cable Fixed installation for instrument at Communication, control system, general purposes

#### Standards applied

- IEC 60092-338 : Design guidelines
- NEK 606(2004)
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

#### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	R	EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad.
Collective Screen	(c)	Pairs / triads are laid up and collectively screened by copper(or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by printed numbers on insulation.
Sheath	U U/B	Flame retardant halogen free thermoset compound Flame retardant halogen free & mud resistant thermoset compound
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

#### Cable Type 250V RU(c) & 250V RU/B(c) Unarmoured Collective Screen, Twisted Pair/Triad

## Instrumentation & Communication Cable

### 250V BU(i), BU/B(i)

#### Halogen Free Fire Resistant Unarmoured Cable Individual Screen

- 250V BU(i)

NEK 606 Type : S13

#### Halogen Free & Mud Resistant Fire Resistant Unarmoured Cable Individual Screen

- 250V BU/B(i)

NEK 606 Type : S3/S7

#### Application

- Unarmoured cable Fixed installation instrumentation, communication control and alarm emergency and critical system.

#### Standards applied

- IEC 60092-376 : Design guidelines
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

#### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Individual Screen	(i)	Each pair / triad are individually screened by copper (or aluminum) backed polyester tape with tinned copper drain wire. Each pair / triad is wrapped with polyester tape. Pairs/triads are identified by numbered tape and printed numbers on insulation.
Sheath	U U/B	Flame retardant halogen free thermoset compound Flame retardant halogen free & mud resistant thermoset compound
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

• Cables to 1000°C with an upgraded IEC 60331 test.

#### Cable Type 250V BU(i) & 250V BU/B(i) Unarmoured Individual Screen, Twisted Pair/Triad

### Instrumentation & Communication Cable

## 250V BU(c), BU/B(c)

### Halogen Free Fire Resistant Cable Collective Screen

- 250V BU(c)

NEK 606 Type : S14

### Halogen Free & Mud Resistant Fire Resistant Cable Collective Screen

- 250V BU/B(c)

### Application

- Unarmoured cable Fixed installation instrumentation, communication control and alarm emergency and critical system.

### Standards applied

- IEC 60092-376 : Design guideline
- NEK 606
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Glass tape + EP-Rubber
Twisting		Color coded cores twisted together to form a pair / triad
Collective Screen	(c)	Pairs / triads are laid up and collectively screened by copper(or aluminum) backed polyester tape with tinned copper drain wire. Pairs / triads are identified by printed numbers on insulation.
Sheath	U U/B	Flame retardant halogen free thermoset compound Flame retardant halogen free & mud resistant thermoset compound
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

• Cables to 1000°C with an upgraded IEC 60331 test.

## Instrumentation & Communication Cable

### 250V BU(i&c), BU/B(i&c)

#### Halogen Free Fire Resistant Cable Individual & Collective Screen

- 250V BU(i&c)

#### Halogen Free & Mud Resistant Fire Resistant Cable Individual & Collective Screen

- 250V BU/B(i&c)

#### Application

- Unarmoured cable Fixed installation instrumentation, communication control and alarm emergency and critical system.

#### Standards applied

- IEC 60092-376 : Design guideline
- NEK 606(2004)
- IEC 60331 : Fire resistance
- IEC 60332-3 : Flame retardant Cat. A
- IEC 60754-1 : Halogen free properties
- IEC 61034 : Low smoke properties
- CSA C22-2 NO-38 : Low Temperature properties (optional)

## Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire
Insulation	B	Mica / Glass tape + EP-Rubber
Twisting		Color coded cores twisted together to form a pair/ triad
Individual Screen	(i)	Each pair / triad are individually screened by copper(or aluminum) backed polyester tape with tinned copper drain wire. Pairs/triads are identified by numbered tape and printed numbers on insulation.
Collective Screen	(c)	Individually screened pairs / triads are laid up and collectively screened by copper (or aluminum) backed polyester tape with tinned copper drain wire.
Sheath	U U/B	Flame retardant halogen free thermoset compound Flame retardant halogen free & mud resistant thermoset compound
Color		Non-intrinsically safe cable : Grey Intrinsically safe cable : Blue

• Cables to 1000°C with an upgraded IEC 60331 test.

Low Voltage Earthing & Bonding Wire

Technical Data

### Low Voltage Earthing & Bonding Wires

## 0.6/1kV UX

### Halogen Free Flame Retardant Single Wires

- 0.6.1kV UX

NEK 606 Type : P15

### Application

- Insulated conductor for earthing and bonding services.
- On general purposes.

### Standards applied

- IEC 60092-353 : Design guideline
- IEC 60332-1 : Flame retardant
- IEC 60754-1 : Halogen free properties

### Construction

Classification	Code Letter	Construction Detail
Conductor		Tinned, Annealed, Stranded copper wire.
Insulation	U	Flame retardant halogen-free thermoset compound.
Sheath	X	Non - Sheathed
Color		Yellow/green for earth wire Black, Blue, Red for single wire (general purposes)

## Electrical Data → → → → → → →

### 1. Construction and Resistance of Conductor

#### 1) Resistance Formula :

$$R = \rho \frac{L}{A}$$

- R = Resistance in ohm per phase
- A = Conductor area, mm<sup>2</sup>
- L = Conductor length, m

$$R = R_0 [ 1 + \alpha (t - 20) ]$$

- R<sub>0</sub> = Resistance at t = 20°C
- α = 0.00393 for copper
- t = Conductor temperature, °C

### 2. Calculation of Electrical Data

#### 1) Inductance :

for 2, 3 & 4 conductor cables is given by the formula:

$$L = 0.2 \times \left[ \ln \left( \frac{2a}{d} \right) + 0.25 \right] \times 10^6$$

- L = Inductance in H/m and phase
- a = Axial space between conductor in mm.
- d = Conductor diameter

#### 2) Reactance :

for 2, 3 & 4 conductor cables is given by the formula:

$$X = 2 \times \pi \times f \times L \times I$$

- X = Reactance in ohm per phase
- L = Inductance in H/m and phase
- f = Frequency in Hz
- I = Conductor length in meter

#### 3) Impedance :

for 2, 3 & 4 conductor cables is given by the formula:

$$Z = \sqrt{(R^2 + X^2)}$$

- Z = Impedance in ohm per phase
- R = Resistance at operating temp. in ohm per phase
- X = Reactance in ohm per phase

#### • Electrical characteristics for instrumentation and telecommunication cables.

Electrical Characteristics	Conductor Size	unit	0.75 mm <sup>2</sup>	1.0 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>

## 3. Current Ratings for Continuous Service

### \ Low Voltage 250V & 0.6/1kV Cable

Nominal Cross Section Area mm <sup>2</sup>	Current Carrying Capacity					
	1C	2C	3C			
	A	A	A			
0.5	10	8.5	7			
0.75	13	11	9			
1.0(0.9)	16	14	11			
1.5	23	20	16			
2.5	40	26	21			
4	51	34	28			
6	52	44	36			
10	72	61	50			
16	96	82	67			
25	127	108	89			
35	157	133	110			
50	196	167	137			
70	242	206	169			
95	293	249	205			
120	339	288	237			
150	389	331	272			
185	444	377	311			
240	522	444	365			
300	601	511	421			
	d.c	a.c	d.c	a.c	d.c	a.c
400	690	670	587	570	483	469
500	780	720	663	612	546	504
630	890	780	757	663	623	546

Note 1. Maximum permissible service temperature of the conductor is 90°

2. The current ratings given above are based on an ambient air temperature of 45°

3. The current ratings given above are for 6 cables of less bunched or laid together in flat formation.

When more than 6 cables are bunched or laid close together, the current ratings given above should be multiplied by correction factor 0.85.

4. For cables with more than 4 core cables, the current ratings are given by the formula.

$$\text{formula : } I = \frac{I_0}{\sqrt[3]{N}}$$

Where,  $I_0$  = Current for single core cable  
 $N$  = Number of cores

5. The current ratings above table are based on the nominal dimension of 0.6/1kV cables. Currents ratings for higher voltage cables, up to 15kV, may be up to about 5% lower than the tabulated values for Low voltage cables.

6. Correction factors for various ambient air temperature

Maximum Conductor Temperature °C	Correction Factor for Various Ambient Air Temperature									
	35	40	45	50	55	60	65	70	75	
85	1.12	1.06	1.00	0.94	0.87	0.79	0.71	0.61	0.50	
90	1.10	1.05	1.00	0.94	0.88	0.82	0.74	0.67	0.58	

## 4. Short Circuit Current Ratings

The short circuit currents quoted here are for cables operating normally at maximum conductor temperature of 90°C.  
EPR insulation is actually capable of withstanding short-term temperature up to 250°C

### SHORT CIRCUIT CURRENT RATINGS

Nominal Area mm <sup>2</sup>	Conductor Dia. mm	Short Circuit Currents (KA)											
		0.03	0.05	0.07	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
1.5	1.59	1.26	0.98	0.83	0.69	0.49	0.40	0.35	0.31	0.28	0.26	0.24	0.23
2.5	2.01	2.02	1.56	1.32	1.10	0.78	0.64	0.55	0.49	0.45	0.42	0.39	0.37
4	2.55	3.25	2.52	2.13	1.78	1.26	1.03	0.89	0.80	0.73	0.67	0.63	0.59

## 5. Voltage Drop

The voltage drop in a cable denotes the difference in voltage at the beginning and at the end of the cable and is calculated from the following formula:

### 1) D.C. voltage drop (2 wire D.C. circuits)

$$V_{\text{drop}} = 2 \times I \times L \times R \text{ [volts]}$$

- Where • I = Load current [Amp]  
• L = Length of cable [km]  
• R = D.C. conductor resistance at Max. rated conductor temperature [Ω/km]

### 2) A.C. voltage drop

#### • Single-phase voltage drop

$$V_{\text{drop}} = 2 \times I \times L \times (R \cdot \cos \phi + X \cdot \sin \phi) \text{ [volts]}$$

- Where • I = Load current [Amp]  
• L = Length of cable [km]  
• R = A.C. conductor resistance at Max. rated conductor temperature [Ω/km]  
• X = Reactance of the cable [Ω/km]  
• φ = Power factor angle by which the current lags (or leads) the voltage

#### • Three-phase voltage drop

$$V_{\text{drop}} = \sqrt{3} \times I \times L \times (R \cdot \cos \phi + X \cdot \sin \phi) \text{ [volts]}$$

- Where • I = Load current [Amp]  
• L = Length of cable [km]  
• R = A.C. conductor resistance at Max. rated conductor temperature [Ω/km]  
• X = Reactance of the cable [Ω/km]  
• φ = Power factor angle by which the current lags (or leads) the voltage

## 6. Electrical Circuit Formulas

For determining amperes, horsepower, kilowatts and kilovolt-amperes

Desired Data	Alternating Current			Direct Current
	Single-Phase	Two-Phases, Four-Wires	Three-Phases	
Amperes when KVA is known	KVA x 1000 E	KVA x 1000 2 x E	KVA x 1000 1.732 x E	KVA x 1000 E
Amperes when KW is known	KW x 1000 E x pf	KW x 1000 2 x E x pf	KW x 1000 1.732 x E x pf	KW x 1000 E
Amperes when HP is known	HP x 746 E x %Eff x pf	HP x 746 2 x E x %Eff x pf	HP x 746 1.732 x E x %Eff x pf	HP x 746 E x %Eff
Kilovolt - Amperes	I x E 1000	2 x I x E 1000	1.732 x I x E 1000	I x E 1000
Kilowatts	I x E x pf 1000	2 x I x E x pf 1000	1.732 x I x E x pf 1000	I x E 1000
Horsepower	I x E x %Eff x pf 746	2 x I x E x %Eff x pf 746	1.732 x I x E x %Eff x pf 746	I x E x %Eff 746

#### Where

- E = Volts between conductors
- I = Line current amperes
- %Eff = Percent efficiency of motor in decimal
- pf = Power factor(cos φ) in decimal
- KVA = Kilovolt-ampere
- KW = Kilowatts
- HP = Horsepower

**Note** In two - phase, three-wire balanced circuits, the current in the common conductor is 1.414 times of formulas of two-phase, four-wire in either of the other conductors.

## Voltage Rating Selection → → → → → → →

### Selection Cable for A.C Systems

Supply System	System Category	System Voltage(KV)				Recommended	
		Phase to Earth( Uo )		Phase to Earth( U )		Maximum Sustained Voltage (Um)	IEC Standards
		Above	Up to and including	Above	Up to and including		
3-Phases 4-Wires	A & B	-	0.15	-	0.25	0.28	0.15 / 0.25
		0.15	0.6	0.25	1	1.2	0.6 / 1
3-Phases 4-Wires	C	-	-	-	0.15	-	0.15 / 0.25
		-	-	0.15	0.6	-	0.6 / 1
		-	0.15	-	0.25	0.28	0.15 / 0.25
		0.15	0.6	0.25	1	1.2	0.6 / 1
		0.6	1.9	-	3.3	3.6	1.8 / 3
3-Phases 3-Wires	A & B	1.9	3.8	3.3	6.6	7.2	3.6 / 6
		3.8	6.35	6.6	11	12	6 / 10
		6.35	8.7	11	15	17	6.35 / 11
		8.7	12.7	15	22	24	8.7 / 15
							12.7 / 22
		-	-	-	0.15	-	0.15 / 0.25
		-	-	0.15	0.6	-	0.6 / 1
3-Phases 3-Wires	C	-	-	0.6	1.9	-	1.8 / 3
		-	-	1.9	3.3	3.6	3.6 / 6
		-	-	3.3	6.6	7.2	6 / 10
		-	-	6.6	11	12	6.35 / 11
		-	-	11	15	17.5	8.7 / 15
							11 / 11
2-Phases 3-Wires or 2-Phases 4-Wires	A & B	-	0.15	-	0.21	-	0.15 / 0.25
		0.15	0.6	-	0.84	-	0.6 / 1
2-Phases 3-Wires or 2-Phases 4-Wires	C	-	-	-	0.15	-	0.15 / 0.25
		-	-	0.15	0.6	-	0.6 / 1
		-	-	0.6	1.9	-	1.8 / 3
1-Phase 3-Wires	A & B	-	0.15	-	0.25	0.28	0.15 / 0.25
		0.15	0.6	0.25	1	1.2	0.6 / 1
		-	-	-	0.15	-	0.15 / 0.25
1-Phase 3-Wires	C	-	-	0.25	0.6	-	0.6 / 1
		-	-	0.15	-	0.15 / 0.25	0.15 / 0.25
		-	-	0.15	0.6	-	0.6 / 1
1-Phase 2-Wires or 1-Phase 1-Wire	C	-	-	0.15	0.6	-	1.8 / 3
		-	-	1.9	3.3	3.6	3.6 / 6
		-	-	3.3	6.6	7.2	6 / 10
		-	-	6.6	11	12	6.35 / 11
		-	-	11	15	17.5	8.7 / 15
							-
							12.7 / 22

**Note** The rated voltage of the cable for a given application shall be suitable for the operating conditions in the system in which the cable is used. To facilitate the selection of the cable, systems are divided into three categories.

Category A : This category comprises those systems in which any phase conductor that comes in contact with earth or an earth conductor, is automatically disconnected from the system within 1 minute.

Category B : This category comprises those systems which, under fault conditions, are operated for a short time, not exceeding 8 hours on any occasion, faults in any year should not exceed 125 hours.

Category C : This category comprises all systems which do not fall into categories A and B.

## Test Methods / Definition of Terms → → → → → → →

### 1. Flame Retardant

IEC-60332-3. CAT. A Test (VTFT)

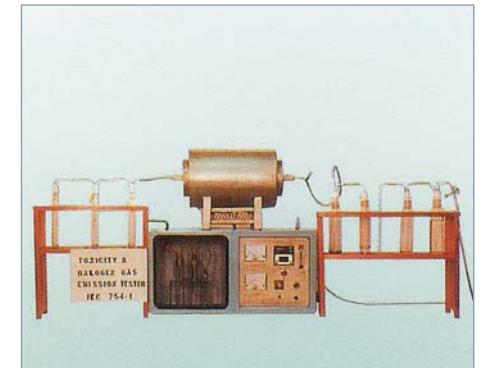

IEC-60332-1test (VFT)

### 2. Fire Resistance (IEC 60331-21 at 750°C)

Upgraded to 1000 can be supplied on request.

Max. content of halogen = 5 mg/g. (0.5%)

### 4. Smoke Emission (IEC 61034-1,2)

Minimum light transmittance is 60%

### 5. Oxygen Index (ASTM D 2863)

### 6. Mud Resistance(SHF MUD)

Mud resistant cables shall be designed with sheathing compounds suitable for installation and operation in contact with MUD unless otherwise specified, Type SHF Mud.  
Each MUD must be tested for compatibility with the cable sheathing.

### 7. Oil Resistance

All thermoset sheathed cables shall be suitable for an oil production installation.  
The oil resistance properties shall be demonstrated by a test according to IEC 60092-350 Paragraph 13,12, with the cable immersed in ASTM oil no.2 at 100 for 24 hours

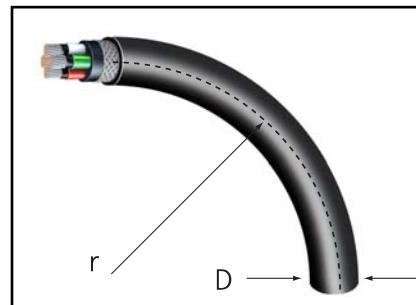

# Installation Recommendations → → → → → → →

The following installation recommendations are in accordance with IEC regulation and practice.

Different regulations may apply in other countries.

## 1. Minimum Cable Bending Radius

Reference Std. IEC 60092-352

### 1-1 Bending radius for cables rated up to 1.8/3kV

Cable Type	Overall Diameter of Cable (D)	Minimum Internal Radius of Bend
Insulation	Unarmoured or Unbraided	4D
	Metal Braid Screened or Armoured	6D
Thermoplastic or thermosetting with circular copper conductors	Metal wire armoured Metal tape armoured or metal-sheathing	6D
	Composite polyester/ metal laminated tape screened units or collective tape screening	8D
Thermoplastic or thermosetting with sector shaped copper conductors	Any	Any
		8D
Mineral	Hard metal sheathed	8D

### 1-2 Bending radius for cables rated at 3.6/6(7.2)kV and above

Cable Type	Overall Diameter of Cable (D)	Minimum Internal Radius of Bend
Single core cable	Any	12D
3- core cables	Any	9D

## 2. Installation Temperature

Minimum recommended installation temperature for cables shall be -20 °C.

## 3. Pulling Tension

The cable pulling tension during installation can be estimated by means of the following formula :

$p = 5\text{kg}$  total cross section of conductors in the armoured cable or,

$p = 2.5\text{kg}$  total cross section of conductors in the unarmoured cable

Additional tension will be supplied from the braid and the insulation and sheathing compound.

## 4. Explosion Risk Areas

### 1) Areas

The areas on board are usually classified in two main categories as regards the explosion risk:

- Hazardous areas : Areas in which explosive gas-air mixtures are, or may be expected to be, present in quantities such as to require special precautions for the construction and use of electrical apparatus.
- Safe areas(non-hazardous areas) : Areas in which explosive gas-air mixtures are not expected to be, present in quantities such as to required special precautions for the construction and use of electrical apparatus.

A hazardous area is divided into three zones :

- Zone 0 : in which an explosive gas-air mixture is continuously present or present for long periods.
- Zone 1 : in which an explosive gas-air mixture is likely to occur in normal operation
- Zone 2 : in which an explosive gas-air mixture is not likely to occur, and if occurs it will only exist for a short time

### 2) Installation of Cables

For cables to be used in zone 0 and zone 1, one of the following types of protection is required :

- A non-metallic outer sheath in combination with braiding or other metallic covering for earth fault detection and mechanical protection. A non-metallic outer sheath is, however, not required if the screen or armouring consists of a corrosion resistant bronze alloy.
- A lead sheathing in addition to further mechanical protection, for example armour braiding or non-metallic impervious sheath.
- For mineral insulated cables, a copper or stainless steel sheath.
- Single core cables in installations with A.C or D.C. current with a high ripple content should be of types without screen or armouring. Where mechanical damage is possible, such cables should otherwise be mechanically protected or installed in ducts or similar.

For installations in zone 2, cables without screen or armour can be used.

## 5. Earthing of Metal Coverings of Cables

### 1) General Requirements

All metal coverings of cables, armouring or shielding shall be earthed. Earthing must be provided at both ends except for final sub-circuits where earthing at only one end (the supply end) is sufficient. Earthing at one end is permitted where it is required for technical or safety reasons, control and instrumentation cables, mineral insulated cables, intrinsically safe circuits, control circuits, etc.

Metal covering of single core cables for AC and single core cables for DC with ripple content exceeding 10% and having a current rating exceeding 20A is to be earthed at one end only. When single core cables for AC and DC with ripple content higher than 10% are installed in or passing through hazardous areas, the metal screen or armour is to be earthed inside the hazardous area to avoid dangerous potential between screen armour and earthed part of the installation.

### 2) Cross Section of Earth Connections

Earth connections for metal coverings shall be carried out with conductors having cross sectional areas related to the cross sectional areas of the phase conductors and the current ratings of the cables, or at least the same cross sectional areas as the metal covering itself.

### 3) Earthing Through Metal Clamps etc.

Metal coverings of cables may be earthed through clamps. The clamps must grip the metal covering of the cable and must be connected to the hull and provide a good conductive connection between the metal covering and the hull. The metal clamps must be corrosion resistant.

### 4) Earthing Through Cable Glands

The metal coverings of cables may be earthed by means of glands intended for the purpose and so designed as to ensure an effective earth connection. The glands shall be firmly attached to, and in effective electrical contact with, a metal structure earthed in accordance with these regulations.

### 5) Earthing of Metal Pipes, Conduits etc.

Metal pipes and cable conduits are to be earthed. Pipes and conduits may be earthed by being screwed into a metal enclosure, or by nuts in both sides of the wall of metallic enclosure, provided that the surface is clean and free from rust, scale or paint.

Comments : for intrinsically safe circuits it is important to separate the earth conductor from the protective earthing.

The resistance between a zener barrier earth and protective earth must be max. 1ohm and preferably less than 0.1ohm to avoid that possible fault current does not lead to a potential increase in the system.

## 6. Fixing of Cables

### General

Cables are to be suitably fixed to the supports. In order to guard against the effects of electrodynamics forces developing on the occurrence of a short circuit, single core cables should be firmly fixed by using supports of a strength adequate to withstand forces corresponding to the values of prospective short circuit current.

The requirement concerning fixing can normally be fulfilled when the cables are clamped as follows:

- For cables entering enclosures and conduits the nearest clamp is to be placed at a minimum distance from the entry of 10 times the diameter the cable concerned from the entry.
- At other points the distance between the clamps must not exceed the in the following table:

External Diameter of Cable (mm)		Max. Spacing of Fixing Points (mm)	
Above	Up to	Cables without Metal Braid or Armour	Cables with Copper, Bronze or Steel Braid or Armour
	8	200	250
8	13	250	300
13	20	300	350
20	30	350	400
30		400	450

## 7. Mechanical Protection of Cables

Cables are to be installed in such a way that they are not subject to damaging mechanical stressed.

where this can not be obtained the cables are to be protected. Unless the cable itself (for example armour or sheath) provides adequate protection the cables should be:

- Enclosed in suitable conduits or casings
- Covered by steel plates or profiles
- Steel pipes in which the cables are run

In areas where there is an exceptional risk of mechanical damage, for example in cargo hold area or different storage areas, the cables always have to be protected, even when the cables are armoured.

The thickness of the protective conduits must be at least 4mm. The wall thickness of the protective conduit must be at least 2mm.

Cables lay on aluminum supports may have a corresponding protection of aluminum, the thickness must be at least 4mm.

Metal casing used for mechanical protection of cables should be efficiently protected against corrosion.

## 8. Installation of Cables for Fire Properties

Cables must at least meet the flame retardant requirements. On board passenger ships, cargo-ships and mobile offshore units, where requirements are considered to be satisfied if the cables have characteristics complying with the cable bunch test IEC-Publication 60332-3, or fire stops are installed in accordance with the following recommendations :

When cables complying with single-cable test, but not the cable-bunch-test, are installed, fire stops are to be provided in enclosed or semi-enclosed spaces except for cargo rooms and tunnels in cargo areas.

### a) For vertical cable runs

- with a max. distance between fire stops of two decks or 6 meters, unless installed in totally enclosed cable ducts
- at the main and emergency switchboard
- where cables enter into an engine control room
- at centralized control panels for propulsion machinery and essential auxiliaries
- at the entrance to cables ducts

### b) For horizontal cable runs.

- Fire stops shall be as specified in item a) above but the maximum. distance between fire stops may be increased to 14m.

When choosing cable types special attention should be paid to reduce possible damage due to corrosion in case of a fire. Non-halogen free cables(materials) will give off corrosive gases during a fire.

The corrosion effect depends on the amount of halogens in the materials used.

Flame retardant cables are to gave characteristics complying with the test requirements in IEC-Publication 60332-1, with amendments.

Fire resistant cables are to gave characteristics complying with the requirements in IEC-Publication 60331.

## 9. Intrinsically Safe Installations

Cables and flexible cables for intrinsically safe circuits must have screen or similar of a conducting material and the outer sheath must be of an insulating material. A non-metallic outer sheath is, however, not required if the screen or armour consists of a corrosion resistant bronze alloy. Where there is no danger of interference from the external electrical or magnetic fields, short flexible cables may be used without screen.

### a) Associated equipment

Associated equipment (e.g. power supply units) shall be situated in a safe area or has protection as mentioned in Explosion risk areas.

### b) Connection of equipment

Within limitations laid down in 3., ordinary non-explosion protected equipment may be connected to intrinsically safe equipment, provided that it is designed to meet regulations in other respects.

### c) Compliance with any limitations in the certificate

With intrinsically safe circuits special considerations must be given to ensure that the circuits characteristics (including connected equipment, cables, conductors etc.) satisfy any limitations in the test certificate. Such limitations may be maximum values for capacitance and inductance etc. It is pointed out there is a danger of damage to i.s equipment when using normal equipment for insulation testing

### d) Adjacent location

Conductors for i.s safe circuits and conductors for non-i.s safe circuits shall not be run together in the same cable, flexible cable, conduit, cables bunch etc.

### e) Protection against electrical and magnetic fields

Where i.s circuits are exposed to magnetic or electrical field that may destroy the intrinsic safety of the system.

Precautions must be taken during installation. Such precautions may be:

- cables for i.s circuits and non - i.s circuits to be installed a minimum distance of 50mm apart.
- The minimum distance to heavy current cables using D.C with a high ripple content should be 300mm.
- cables for i.s circuits and non -i.s circuits to be separated panel of conducting material which is earthed.
- cables for i.s circuits to have effective transposition.

### f) Marking

The marking may be a marking plate or by color marking of the cables when using color marking, the color should be light blue.

## Core Identification → → → → → → →

### 1. High Voltage Power Cables

The individual cores shall be identified by the colored semi-conducting tape or colored ribbon tape run longitudinally on the non-metallic part of insulation screening and the color scheme shall be as follows;

- 1 core : Off-white (grey)
- 3 cores : Off-white (grey), Black, Red or White, Red, Blue

The other color scheme may be applicable when purchaser required.

### 2. Low Voltage Power and Control Cables

The insulated cores shall be identified by the color of insulation or by the number printed on insulated cores; as follows

- 1 core : Off-white(Grey) or Black
- 2 cores : Off-white, Black
- 3 cores : Off-white, Black, Red
- 4 cores : Off-white, Black, Red, Blue or Black, Off-white, Red, Green.
- 5 cores and above core : white number on black insulation or black number on white insulation
- Earth core : Green/Yellow (green with yellow trace)

The other color scheme may be applicable when purchaser required.

### 3. Instrumentation and Communication Cables

Each pair / triad shall be identified as follows.

- Pairs : Black, Light blue or Black, White
- Triads : Black, Light blue, Brown or Black, White, Red

For identification of multi-pair/triad cables, pair/triad are identified by lapping of the numbered tape or by the number print directly on the each cores, and the number interval shall be 100mm or less.

The other color scheme may be applicable when purchaser required.
